Who is Suha Bishara

Suhad Bishara is a Palestinian speech-language pathologist from the city of Tira, specializing in neuro-rehabilitation with a precise focus on swallowing and feeding disorders (dysphagia) and oral motor functions in both children and adults. Since 2016, she has been a clinician at the Loewenstein Rehabilitation Medical Center, a leading institution in its field. In her role, she treats patients with acquired brain injuries and various neurological diseases that impact their ability to swallow, speak, and communicate effectively. In addition to her clinical responsibilities, Bishara is dedicated to mentoring students and new specialists entering the field. She has developed a comprehensive digital platform, including a professional website and multiple social media channels, to raise awareness and provide reliable, Arabic-language educational content on speech, language, and swallowing health for all ages. Through this platform, she also offers online consultations, providing direct guidance and support to parents and adults.

Achievements of Suha Bishara

Suhad Bishara was the lead author of a scientific study published in the peer-reviewed journal "Children" in February 2026. The paper, titled "Prognostic Factors of Dysphagia and Recovery Following Pediatric Acquired Brain Injury," provides significant insights into the diagnosis and treatment of swallowing disorders in children post-neurological injury, highlighting her advanced clinical and research expertise. She has established an influential Arabic-language digital presence focused on speech and swallowing disorders, creating educational content through her website and social media platforms. Through this initiative, she aims to fill a critical gap in reliable Arabic resources in her specialty and offers professional online consultations to support families who may lack easy access to specialized services.
