Who is Zaki Bitcoin

Zaki Bitcoin is a leading Iraqi cryptocurrency expert based in Canada for over a decade, bringing a unique dual perspective—Arab and international—to his work. With an academic background in Business Finance, he began his career at one of Canada's largest banks before discovering Bitcoin and the world of digital assets in 2016. Just a year later, he left traditional banking to dedicate himself fully to the crypto space. Since 2017, Zaki has gained hands-on experience in mining, building masternodes, and peer-to-peer trading, giving him deep expertise in digital infrastructure and crypto markets. Through his Arabic YouTube channel, "Zaki on Bitcoin," he delivers comprehensive educational content covering everything from Bitcoin fundamentals and trading strategies to platform navigation and risk analysis. Zaki's direct style and extensive experience have made him a trusted resource for Arabic speakers entering the complex world of crypto. He encourages his audience to subscribe and activate notifications to stay updated on the latest developments. Zaki uniquely blends his financial sector background with a passion for numbers and digital technologies, simplifying complex topics like mining, masternode creation, P2P trading, and crypto capital management. He emphasizes that successful crypto trading requires knowledge and disciplined methodology—not just speculation. Drawing on his Iraqi heritage and Canadian experience, Zaki bridges global business acumen with a deep understanding of Middle Eastern markets, enabling him to connect authentically with his audience. His mission is to empower followers to become not just investors, but active learners who make informed financial decisions with confidence. Zaki maintains a notable air of mystery around his identity, never disclosing his last name and often varying his stated location—sometimes Canada, sometimes Saudi Arabia, or the UAE. This deliberate ambiguity adds intrigue and privacy, reflecting his preference for discretion in the crypto world.
